The Pet Travel Scheme (PETS)

Non-European Union countries -
dogs and cats

This fact sheet replaces fact sheet 4 dated February 2006. European Regulation 998/2003 took effect on 3 July 2004. It sets out the animal health requirements for pet animals travelling between European Union (EU) countries and into the EU from other countries.

In this fact sheet, “pet” refers to a dog or cat and includes assistance dogs.

This fact sheet explains how to prepare a dog or cat resident in the UK or a non-EU listed country to enter or re-enter the UK under the Pet Travel Scheme (PETS) from a non-EU listed country (see part 3a). It covers pets travelling with an EU pet passport or a third country official veterinary certificate. Annex A explains the options for dogs and cats from a country not listed in part 3. See fact sheet 2 if your pet is travelling with a PETS certificate.

For details of other fact sheets in this series and contact points see part 6.

PART 1: THE RULES

To enter or re-enter the UK from a non-EU listed country without quarantine a pet must, in this order, be microchipped, vaccinated against rabies and blood tested. It must also be issued with an EU pet passport or a third country official veterinary certificate and treated against ticks and tapeworms. See part 2 for detailed procedures.

Your pet must not have been outside any of the countries listed in part 3 in the 6 calendar months immediately before travelling to the UK and must enter the UK using an approved transport company and route (see part 3c).

For advice on taking your pet from the UK to non-EU listed countries see part 5b.

- The 6 month rule for entering the UK

Your pet may not enter or re-enter the UK under PETS until 6 calendar months have passed from the date that a vet took the blood sample which gave a satisfactory test result. The date the blood sample was taken is shown in section V of the passport or certificate which the vet must complete (see part 2, steps 3 and 4).

Your pet requires only one blood test and 6 calendar month wait provided all subsequent rabies booster vaccinations are given by the required date.
This wait is necessary because an animal infected with rabies before vaccination would not be protected by the vaccine. Six months is the time needed for most infected animals to display any clinical signs of the disease.

The rules are to protect human and animal health and to reduce the risk of importing rabies into the UK. Animals not meeting all the rules must be licensed into quarantine.

- **Where PETS procedures can be carried out**

Your pet can be fitted with a microchip in any country. Rabies vaccinations, blood sampling, the tick and tapeworm treatment and issuing of documents must all be carried out in either the UK or any of the listed countries.

**PART 2: PREPARING YOUR DOG OR CAT**

Use the checklist at Annex B as you follow the steps.

**Step 1: The microchip**

Your pet must first be fitted with a microchip. We recommend that it meets ISO Standard 11784 or Annex A to ISO Standard 11785. If the microchip does not meet one of these Standards you must provide a reader that can read the microchip number at the time of any inspection.

Ask the person fitting the microchip to check that its number can be read before and after it has been fitted. Get your vet to read the microchip every time you visit.

**Step 2: The rabies vaccination**

- **When to vaccinate**

Pets being prepared to enter or re-enter the UK must be vaccinated in accordance with the recommendation of the vaccine manufacturer’s data sheet. They must be vaccinated after a microchip has been fitted. Get the vet to read the microchip number before the vaccination.

If your pet was vaccinated before the microchip was fitted, it will have to be vaccinated again. This is to make sure that it is correctly identified when vaccinated.

- **Vaccination record**

When your pet is vaccinated, make sure that the vet accurately records the following details on its vaccination record and passport or third country official veterinary certificate:

- its date of birth/age
- the microchip number, date of insertion and its location in the animal
- the date of vaccination
• the vaccine manufacturer, product name and batch number
• the date by which the booster vaccination must be given (i.e. the “Valid until” date). This date is calculated by reference to the validity period of the vaccine given in the vaccine manufacturer’s data sheet.

• **Booster vaccinations**

After your pet has been vaccinated and blood tested with a satisfactory result, it will need booster vaccinations. These **must** be given by the “Valid until” date in section IV of the passport or veterinary certificate, or on the PETS certificate, and be recorded on the vaccination record and in section IV of the passport if you have one.

If the booster date is missed, your pet will have to be vaccinated and blood tested again. The 6 month rule will apply from the date the new blood sample is taken, provided the result is satisfactory. If you have a passport, a vet (in Great Britain a Local Veterinary Inspector (LVI)) will need to complete the second box in section V.

**Step 3: The blood test**

After being vaccinated, your pet must have a blood test to make sure that the vaccine has worked. For pets being prepared in an EU country, this can be carried out after your pet has travelled to a non-EU listed country unless a blood test is required for entry to that country - see part 5b.

Your vet will tell you the best time for the blood test to be done and will take a blood sample to be analysed at an EU-approved laboratory. Take your pet’s vaccination record with you when the blood sample is taken. Ask your vet to read the microchip and to give you a signed record of the date the sample was taken that accurately shows your pet’s microchip number.

A satisfactory blood test result will show that the rabies antibody titre was equal to or more than 0.5IU/ml. Make sure your vet gives you a certified copy of the result, accurately showing the microchip number and the date the blood sample was taken, and keep it safe.

Your pet requires only one satisfactory blood test and 6 calendar months wait **provided** the subsequent rabies booster vaccinations are given by the required date. See step 2 if the date is missed.

If your pet fails its blood test it must be blood tested again. Your vet will advise if it first needs to be revaccinated. The 6 month rule will apply.

**Step 4: Documentation**

After your pet has passed its blood test you must get either an EU pet passport (for pets in EU countries and certain non-EU listed countries) or a third country official veterinary certificate (for pets in non-EU listed countries not issuing passports). If the blood test is to be carried out in another listed country, you can get a passport after your pet has been microchipped and vaccinated against rabies.
(a) EU pet passport

- **How to get a passport**

In Great Britain, the passport is issued by an LVI. If your veterinary practice does not have a resident LVI, your vet may be able to tell you where the nearest one works. Your local Animal Health Divisional Office can also provide these details. Defra does not charge vets for the passport.

In other countries issuing passports, a vet will issue the passport.

When you go to get the passport take your pet, its vaccination record and blood test result. These documents must show your pet’s microchip number. Also take evidence of the date your pet was microchipped. Make sure that the vet correctly completes sections I to IV of the passport and V if necessary.

- **Using the passport**

To enter the UK, the passport must show that your pet has been microchipped, has a current rabies vaccination and has had a satisfactory blood test. It must also show a current treatment for ticks and tapeworms at the time of entry (see step 5).

A passport may not be used enter or re-enter the UK under PETS until 6 calendar months have passed from the date that the blood sample which gave a successful test result was taken. You can then continue to use the passport to enter the UK provided your pet is revaccinated by the “Valid until” date in section IV (see step 2 if the date is missed). To enter the UK, the passport must also show a current treatment for ticks and tapeworms at the time of return (see step 5). For travelling from the UK to other countries, see part 5(b).

- **Replacing the passport**

When the passport is full, you should apply to a vet (in Great Britain an LVI) for a new one. Take the full passport and your pet with you.

If you lose the passport, you may obtain a new one by producing your pet’s vaccination record and blood test result, both of which must show your pet’s microchip number.

(b) Third country official veterinary certificate

This certificate can be issued by any vet in a non-EU listed country. It is headed “Veterinary certificate for domestic dogs, cats and ferrets entering the European Community for non-commercial movements (Regulation (EC) No 998/2003)”. The certificate must be a single sheet in English and may also contain a translation in another language. It must be completed in block letters in the language of the EU country of entry or in English.
When you go to get the certificate take your pet, its vaccination record and blood test result. These documents must show your pet’s microchip number. Also take evidence of the date your pet was microchipped.

Make sure that the vet correctly completes sections I to V of the certificate and enters his/her own details in the following box. If the vet is not a government-approved veterinarian, the certificate must also be dated and stamped by a vet authorised by the competent authority.

- **Validity of the certificate**

You need to be aware of the following. **The certificate will not become valid for entry to the UK for 6 calendar months from the date the blood sample was taken shown in section V. However, it is only valid for entry to the EU and subsequent travel within the EU for 4 months from the date it was signed or endorsed, or until the “Valid until” date shown in Part IV, whichever is earlier. You should therefore delay getting the certificate until a month or two before you travel to ensure that it will still be valid when you enter the UK. To enter the UK, the certificate must also show a current treatment for ticks and tapeworms at the time of return (see step 5).**

In addition to the certificate, when you travel you must have with you your pet’s original vaccination record and blood test result (or certified copies) which show the microchip number.

- **Changing the certificate for a pet passport**

If the certificate expires while you are in the EU, you will need to ask a vet to issue a European pet passport (see fact sheet 3). In addition to the certificate, you must provide the vet with your pet’s original vaccination record and blood test result (or with certified copies) which show the microchip number. Make sure your pet is revaccinated against rabies by the “Valid until” date in section IV of the certificate (see step 2 if the date is missed).

**Other documents you might need to enter the UK**

- Cats travelling from Australia must be accompanied by a certificate certifying that they have not been on a holding where Hendra disease has been confirmed in the 60 days prior to departure. The certificate must be completed by the Australian government veterinary services and show the cat’s microchip number.

- Pets which transit an unlisted country when travelling to the UK need a declaration from the transport company to confirm that they remained within the ship or the perimeter of the airport and did not come into contact with other animals during the stopover.

Keep your documents safe because the transport company checking your pet will need to see them.

| You are responsible for ensuring that you have the correct | 5 |
documentation for your pet to enter the UK. Make sure that it is completed correctly and your pet meets all the rules. If you do not, your pet may not be able to enter the country or may have to be licensed into quarantine on arrival. This will mean delay and cost you money.

Step 5: Treatment against parasites

Before your pet can enter the UK, it must be treated against ticks and tapeworms. Any vet in a listed country can give the treatment. You must not do it yourself. Make sure the vet reads your pet’s microchip before treatment.

Your pet must be treated **not less than 24 hours and no more than 48 hours before being checked in** with an approved transport company to travel into the UK. The treatment must be given **every time** your pet travels to the UK.

If you are taking your pet abroad from the UK on a day trip, it will need to be treated in the UK **not less than 24 hours and not more than 48 hours before it is checked in** for the return journey.

The product used for the tick treatment must be licensed for use against ticks and have a marketing authorisation in the country of use. Tick collars are not acceptable.

The product used for the tapeworm treatment must contain *praziquantel*.

The treatments are to stop the tapeworm *Echinococcus multilocularis* and certain ticks entering the UK. These parasites can carry diseases which can infect other animals and humans causing illness and sometimes death.

- **Recording the treatment**

After the treatment, the vet must fill in sections VI and VII of either the EU pet passport or the third country official veterinary certificate.

For both documents, the **date** and **time** of treatment (using the 24 hour clock), the name of the product used and its manufacturer must be shown. The vet must stamp and sign the passport or sign, date and stamp the certificate. Make sure all these details are correctly recorded **before** you leave the vet.

**PART 3: TRAVELLING TO THE UK**

Listed countries are subject to change. For the latest situation see the PETS website or ring the Helpline.

(a) **Non-EU listed countries and territories**

UK-resident pets can, having travelled to any of the non-EU countries listed below, return to the UK under the Scheme. Pets that come from any of these countries can also enter the UK under PETS. Pets must not have been outside any of the EU or non-EU listed countries in the 6 calendar months before travelling to the UK.

1 Jamaican law as at October 2005 prevents their involvement in PETS. See the website or contact the Helpline to check for any change in this situation.

The maximum number of all types of pet animals (not only dogs and cats) each person may bring into the EU from most non-EU listed countries is 5. This rule does not apply to animals brought from Andorra, Iceland, Liechtenstein, Monaco, Norway, San Marino, Switzerland or the Vatican. For details of transporting more than 5 animals into the EU from countries except those named in the previous sentence contact Defra's International Animal Health Division on 020 7904 6415 (e-mail: iah-imports@defra.gsi.gov.uk).

(b) EU countries and territories:

1 Dogs and cats prepared for PETS in, or returning under PETS to the UK from, the Republic of Cyprus may enter or re-enter the UK without quarantine. However, as at October 2005, PETS compliant animals travelling from north Cyprus (the area north of the Buffer Zone) must be licensed into quarantine for 6 months on arrival in the UK. See the website or contact the Helpline to check for any change in this situation.

2 Includes St Barthelemy and St Martin (French part of the island)

3 There are no requirements for pets travelling directly between the UK and the Republic of Ireland

Pets normally resident in the Channel Islands, Isle of Man or the Republic of Ireland can enter the UK from listed countries if they meet the rules.
Owners of pets entering the Channel Islands or the Republic of Ireland from outside the British Isles should contact the appropriate authorities in those countries for advice on approved routes and any other requirements.

(c) How to travel

If you bring your pet into the UK under the Scheme direct from a non-EU listed country you must use one of the routes and transport companies on the enclosed non-EU route list. When travelling by air, most pets will travel as cargo. However, on certain air routes registered assistance dogs may travel in the cabin. There is a separate route list for assistance dogs.

Alternatively, you may travel to another listed non-EU or EU country and then enter the UK on an authorised route. In this case, unless your pet does not leave the confines of the airport during the interchange, the tick and tapeworm treatment must be given before you check in for the final stage of your journey. See part 2, step 4 if your pet transits an unlisted country on its journey to the UK.

Routes may change and new ones may be added. For the latest information, see the PETS website or ring the PETS Helpline. Some routes are seasonal or irregular so check availability with the transport company.

Check your pet’s travel arrangements with the company as they may have their own conditions of travel which could include a health declaration. Check the costs, requirements and procedures before booking your journey to the UK.

If travelling by air, you may need to arrange with the transport company for the passport or official certificate to accompany your pet. (You may wish to keep a copy for reference).

If your pet enters the UK with an unapproved transport company or on an unauthorised route, you will need to arrange for it to be licensed into quarantine on arrival with a view to obtaining its early release. If it can be shown that your pet meets all the necessary requirements of the Scheme it can be released within a few working days. See (d) below.

(d) Early release from quarantine

Any pet entering the UK which does not meet all the Scheme rules must be licensed into quarantine. It may be released from the date it can be shown to comply with the rules. To license your pet into quarantine, you must get an import licence from Defra (for England), SEERAD (for Scotland) or DARD (for Northern Ireland) before it travels to the UK. Part 6 gives contact details. The licence must accompany your pet when it travels. You must meet the costs of quarantine.

(e) Travel charges

Transport companies will usually include travel, checking and handling charges in the ticket price for your pet. Check when you make your booking.
No charges are made by Defra or the Devolved Authorities.

(f) Customs formalities

When bringing a pet into the UK from outside the EU you must complete Customs formalities. An agent, travel company or airline should be able to do this for you and may charge for this service. Alternatively, you might be able to make your own arrangements. This would involve contacting the Customs authorities at your arrival point in the UK to obtain details of the necessary procedures and the appropriate Customs form. You are advised to discuss these charges with your agent etc before you travel as they might be included as part of a package. These charges are not made by the UK Government.

PART 4: THE PETS CHECK

Pets travelling to the UK by air will have their microchip and official documentation checked on arrival by staff at the Animal Reception Centre.

Pets travelling on an authorised sea route from a non-EU country will be given the same check on arrival. If they travel on an authorised sea route from an EU country or by Eurotunnel, they will be checked before boarding.

If your pet fails the check, it will either have to go into quarantine or be re-exported, or it will not be allowed to travel until the problem has been resolved. If a pet arriving by air has failed only because it has not met the rules on tick and tapeworm treatment, it must be treated on arrival and then held for 24 hours after treatment. If the animal arrives at Heathrow, this can be done there. In all other cases it must be done at local quarantine premises. If it is treated in quarantine, you will have to seek approval for its early release (part 3d).

Your pet may be subject to a further official check by Defra or SEERAD after it has been checked by the transport company. This is for quality assurance purposes.

PART 5: PETS IN THE UK AND ABROAD

(a) Pets travelling within the British Isles

Pets resident in the UK, Channel Islands, Isle of Man or Republic of Ireland, or which have entered the British Isles under PETS, can travel freely between these countries without the need for any papers. However, if you have PETS documents you are advised to take them with you. Pets can be carried on any route within the British Isles subject to the transport company’s agreement and conditions of carriage.

(b) Taking your pet into non-EU listed countries

Before travelling with your pet to any of these countries you are advised to find out whether they have any import or export requirements for dogs or cats. For entry, many require an export health certificate and some an import
licence. Other documents or treatments may also be required. Some of these countries accept an EU pet passport for entry.

Some countries may require your pet to have been vaccinated against rabies within a specified period before its arrival. You may therefore have to get it vaccinated again before the booster is due.

Advice on export requirements is available from your local Animal Health Divisional Office or contact the authorities (e.g. the Embassy) of the appropriate country. See also (d) below. For rules to re-enter the UK see parts 1, 2 and 3.

Residence
If your pet stays in another country it may become subject to that country’s rules on residence. You are advised to check with the authorities of the country what those rules are and what implications becoming resident will have for your pet. For example, some countries require resident pets to have an annual rabies vaccination.

(c) Dangerous dogs and hybrid animals

It is illegal to possess certain types of dogs in the UK. For a list of banned breeds and other information visit the Defra website at http://www.defra.gov.uk/animalh/welfare/domestic/dogs.htm or telephone Defra on 020 7904 6910. Contact points for SEERAD and DARD are given in part 6. If you bring one of these dogs into the UK, you could be prosecuted and the dog seized and destroyed. If in doubt, don’t travel with it.

For rules on keeping dangerous wild animals, including wolf-dog hybrids and domestic cat / wild cat hybrids, see: http://www.defra.gov.uk/animalh/quarantine/pets/dangerous_dogs.htm. This page includes information on hybrid cats which may enter the UK under the rules of the Pet Travel Scheme.

(d) Dogs in other countries

Some countries may not allow certain types of dog to enter and may have rules on others (e.g. muzzling, maximum size). Before travelling, you are advised to check the rules with the authorities (e.g. the Embassy) of the country you wish to visit.

(e) Health and welfare of your pet

When abroad your pet may come into contact with animal diseases which we do not have in the UK, e.g. diseases transmitted by ticks, and parasites like heartworm. These could kill your pet or make it seriously ill. Some can affect humans.

Before you take your pet abroad, consult your vet about any preventative treatment necessary and how to look for signs of ill health in your pet.
If your pet becomes ill after returning to the UK, explain where it has been so your vet can consider diseases not normally found in the UK. A scheme called DACTARI has been set up to record these diseases. Please remind your vet about it (see separate enclosure).

Also consider the welfare needs of your pet when travelling abroad, and whether it will benefit from travelling with you. A leaflet on your pet’s welfare when travelling is available from the PETS website, Helpline, SEERAD, NAWDEPC and DARD.

PART 6: MORE INFORMATION

Other fact sheets

- Fact sheet 1 gives a general introduction to the European Regulation on the movement of pet animals.

- Fact sheet 2 explains the special arrangements that have been made for dogs and cats to travel within or into the EU with a valid PETS certificate.

- Fact sheet 3 explains the rules for dogs and cats travelling between EU countries with an EU pet passport.

- Fact sheet 5 explains the rules for the movement of ferrets into the UK.

- Fact sheet 6 explains the rules for the movement of pet rabbits and rodents into the UK.

Annex A

PETS FROM UNLISTED COUNTRIES

**Dogs and cats resident in an unlisted country entering the UK direct or via any non-EU country**

A pet entering the UK from an unlisted country, whether directly or via any non-EU country, will have to be licensed into quarantine for 6 months on arrival *(see part 3d although early release will not apply)*.

**Dogs and cats resident in an unlisted country entering the UK via another EU country**

Alternatively, to enter the UK from an unlisted country without quarantine a pet can be fully prepared for PETS after entry into an EU country (other than the UK, Ireland, Sweden or Malta) by following the procedures set out in part 2. In this case, a pet already fitted with a microchip is not required to be re-microchipped. The 6 month rule will also apply and your pet must be given tick and tapeworm treatment and enter the UK with an approved transport company on an authorised route.
Before entering an EU country (other than the UK, Ireland, Sweden or Malta) from an unlisted country, your pet must:

- be identified by a microchip (or a tattoo may be accepted by certain countries)
- be vaccinated against rabies
- have a blood sample taken by an authorised veterinarian at least 30 days after vaccination and 3 months before travelling to an EU country
- have a blood test result from an EU-approved laboratory showing that the rabies antibody titre was equal to or more than 0.5IU/ml
- be accompanied by a certificate issued by an official veterinarian certifying compliance with the above requirements

Pets re-entering the EU (other than the UK, Ireland, Sweden or Malta) from an unlisted country with an EU pet passport

Pets re-entering the EU (other than the UK, Ireland, Sweden or Malta) from an unlisted country with an EU passport certifying that the procedures in the previous paragraph have been carried out do not need to undertake the 3 month wait referred to in bullet 3. A satisfactory blood test must have been carried out at an EU-approved laboratory before the animal left the EU. Before being able to enter the UK, the pet must wait 6 calendar months in an EU country (other than Ireland, Sweden or Malta). Re-preparation is not required. Your pet must then be given tick and tapeworm treatment and enter the UK with an approved transport company on an authorised route.

If any of the conditions are not complied when your pet enters the UK it must be licensed into quarantine. It may be released from the date it can be shown to comply with the rules.

Annex B

PETS CHECKLIST FOR ENTERING THE UK

Tick the boxes as you complete the steps.

Preparing your pet

Step 1

My pet has been microchipped

I have a microchip reader (only if the microchip is not ISO Standard)

The microchip can be read
Step 2
My pet was vaccinated in accordance with the recommendation of the manufacturer's data sheet.

It was vaccinated after being fitted with a microchip

The microchip number has been entered correctly by the vet on the vaccination record and passport or third country veterinary certificate

Step 3
I have a record from the vet of the date the blood sample was taken, showing the correct microchip number. The blood sample was taken after the vaccination.

My pet has had a satisfactory blood test at an EU-approved laboratory

I have a certified copy of the blood test result showing the correct microchip number and the date the blood sample was taken

Step 4
A vet has correctly filled in all the details in sections I - V of the passport or the official veterinary certificate. The certificate has been endorsed by a government-approved vet if necessary.

The passport/certificate will be valid for entry to the UK on the date of arrival (i.e. at least 6 calendar months from the date a blood sample was taken from my pet that gave a satisfactory test result)

If I am bringing a cat from Australia, I have the required Hendra certificate

Step 5
A vet has treated my pet for ticks and tapeworms 24 – 48 hours before it will be checked-in with an approved transport company for its journey into the UK

The vet has correctly filled in sections VI and VII of the EU pet passport or veterinary certificate

Travelling to the UK
I have arranged for my pet to travel to the UK using an approved transport company and route

If travelling with an official certificate, I also have with me my pet's vaccination record and blood test result both showing the microchip number (step 4)
If my pet transits an unlisted country when travelling to the UK, I have obtained the required declaration from the transport company (step 4).

If my pet is entering quarantine, I have obtained an import licence from Defra, SEERAD or DARD before travelling (part 3d).
